

To Whom It May Concern:

A couple of years ago, while performing a routine change of the HVAC filter, we discovered standing water, mold and some disturbing dampness under the house. After consulting Mike Martin and having him inspect the premises, we decided that *Vent the Crawl* would be the best solution. The system was installed and we saw results within a very short period of time. The system has performed in exemplary fashion everyday since installation. The water around the perimeter of the foundation is gone and the mold has never returned.

Since then, Mike has performed other building services for us. The work has never been less than top quality. Because he has more than thirty years experience in all aspects of the building construction field, we have come to rely on his advice and expertise when it comes to building construction, repair and maintenance.

Without any reservation we recommend the services Mike Martin. *Vent the Crawl* solved our foundation problems and no doubt saved us many thousands of dollars in future repairs.
